01.28.21 TAP Release
Corrected various Help screens in KinderConnect.
Created a night run job that looks for operator's whose PINs have expired. If any are found, the system will update the provider auto refresh value to force a sync the first time the user logs into the KinderSign tablet.
Changed two items on the Provider>Cases screen. (1) The search label was changed from "Cases Active as of <date>" to "Cases with Active Authorizations as of <date>", and (2) The "Case Closure Date" was added to the results screen.
Added "SUTQ Rating, County, and Provider Type" selectors to the Provider selection screen for Individual Messaging within KinderConnect.
Added the ability for Providers to upload documents into the KinderConnect system (i.e., documentation stating they have been asked to close by the Health Dept., Classroom rosters for closed classrooms, etc.). Also added the ability for the Provider to upload documents for their Sponsors in the KinderConnect system (i.e., documentation stating that they are an essential pandemic worker).
Made an internal database change to add an index that will help speed up the performance of the Attendance Transactions query.
Added Pandemic days back to the Absent day drop down on the Attendance>Detail and Attendance>Submit (correction) screens, so that Providers can enter their own pandemic days.
Corrected an issue where the wrong Provider was being displayed as the person who submitted the attendance on the Attendance>Recall screen for a child attending two providers.
Added functionality within KinderConnect to allow users the ability to unlock their own accounts if they are locked out. Users must first have a valid e-mail account listed in the KinderConnect system before they are able to unlock their account.
Added some additional error log entries in KinderConnect for transactions coming in through iPhones.
Added a new Site setting within KinderConnect to allow users to enter an e-mail address to be used to unlock their account if they accidentally lock themselves out.
Retested a Hot Fix that was applied to MB12. Updated logic to ignore any hours entered on the Customized Schedule Page for the Category of "Building Closed". If the school building is closed, then there is no option for the child to attend

school "in person" so no school hours should be deducted from the child's payment.
